## DETAILED ACTION

### *Election/Restrictions*

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claims 1-10, 36, 37, 42-44 and 46-49, drawn to a method of eliciting or inducing an immune response directed to a microorganism and a composition.

Group II, claims 11-35, drawn to a method of therapeutically or prophylactically treating (treatment and/or prophylaxis) a mammal for microorganism infection.

Group III, claims 38 and 39, drawn to a vaccine.

Group IV, claims 40, 41 and 45, drawn to a pharmaceutical composition.

Group V, claim 50, drawn to an antibody.

Group VI, claim 51, drawn to pharmaceutical composition comprising an antibody.

Group VII, claim 52, drawn to a method of inhibiting, halting, or delaying onset or progression of disease condition by administering an antibody.

The inventions listed as Groups I-VII do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the

same or corresponding special technical features for the following reasons: Group I lacks novelty under PCT Article 33(2) as being anticipated by Richardson et al, 1993 (Insect Molecular Biology, 1993, 1/3:139-147), which discloses a composition comprising inositol glycan domain of GPI and methods of inducing an immune response (see abstract). Group I is the main invention in this application and it lacks novelty, therefore the other claims are not so linked by a special technical feature within the meaning of PCT Rule 13.2 so as to form a single inventive concept.

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

- a). For claims 9, 21, 31 and 48 Applicants should define the four (4) amino acids for  $X_1$   $X_2$   $X_3$   $X_4$ .
- b). For claims 10, 22, 32 and 49 Applicants should elect one GPI inositolglycan domain.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner: see above.

The following claim(s) are generic: 1.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: see above.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
